Pitch

Short pitch

We are fulfilling our true mission of bringing you and your end users a cloud that makes sense with the right combination of compute power and GDPR-compliant storage that is flexible, cost effective, reliable, secure and sustainably powered. Grounded in 20 years of innovation from bare metal to unequalled data centers, artificial intelligence and edge-computing, we are one of the few French and European stakeholders to have full ownership over our projects, with no dependence on three levels: data center design and operation, hardware/software infrastructure, IaaS and PaaS. We offer private data center colocation and infrastructure, dedicated servers for maximum control and punch, and a modern and elastic public cloud ecosystem.

Long pitch

Scaleway is fulfilling its true mission of bringing you and your end users a cloud that makes sense. With a daring approach that challenges the status quo, Scaleway's ecosystem is designed to leverage market standards to make things simpler for you and your team: S3 compatibility, a rolling up-to-date Kubernetes and Terraform support all at the same time.

Customers across more than 160 countries including the fastest-growing startups, enterprises, and government agencies rely on Scaleway as a true multi-cloud alternative that doesn't resort to lock-in practices.

Scaleway is fulfilling its true mission of bringing you and your end users a cloud that makes sense with the right combination of compute power and GDPR-compliant storage that is flexible, cost effective, reliable, secure and sustainably powered.

Grounded in 20 years of innovation from bare metal to unequalled data centers, artificial intelligence and edge-computing, one of the few French and European stakeholders to have full ownership over its projects, with no dependence on three levels: data center design and operation, hardware/software infrastructure, IaaS and PaaS. Scaleway offers private data center colocation and infrastructure, dedicated servers for maximum control and punch, and a modern and elastic public cloud ecosystem.

Mission statement

Mission statement

Our true mission is to bring you the cloud that makes sense.

Scaleway is the obvious scale partner that all developers, architects and business owners are looking for: in short, the cloud that makes sense.

We are fulfilling our true mission of bringing you and your end users a cloud that makes sense with the right combination of compute power and GDPR-compliant storage that is flexible, cost effective, reliable, secure and sustainably powered. Grounded in 20 years of innovation from bare metal to unequalled data centers, artificial intelligence and edge-computing, we are one of the few French and European stakeholders to have full ownership over our projects, with no dependence on three levels: data center design and operation, hardware/software infrastructure, IaaS and PaaS. We offer private data center colocation and infrastructure, dedicated servers for maximum control and punch, and a modern and elastic public cloud ecosystem.

03 Key figures

Key figures

Scaleway takes pride in going against the flow and building the foundation for the future of the cloud industry, with six data centers (four in France, one in the Netherlands, and one in Poland) where energy consumption is sustainable and fairly regulated.

Highlights:

- GDPR compliant, independent & sovereign
- Energy and water efficient & carbon-neutral
- The right performance/price ratio
- **300,000+ customers** are already seamlessly deploying, managing and scaling their digital business with Scaleway
- **150,000+ servers**
- **380+ Scalars**

About Scaleway

Scaleway, leading alternative European infrastructure and platform as-a-service provider (IaaS and PaaS), is catering to the global market with the essential mix of cloud computing resources that is flexible, cost effective, reliable, secure and sustainably powered. Scaleway is one of the few French and European stakeholders to have full ownership over its projects, with no dependence on three levels: data center design and operation, hardware/software infrastructure, IaaS and PaaS. Scaleway offers private data center colocation and infrastructure, dedicated servers for maximum control and punch, and a modern and elastic public cloud ecosystem.

Scaleway has a daring approach that challenges the status quo, its ecosystem is designed to leverage market standards to make things simpler: S3 compatibility, a rolling up-to-date Kubernetes and Terraform support. Scaleway is constantly growing around the world, and currently serves 300,000+ clients in over 160 countries. Scaleway's services are deployed via six data centers located in three regions: Paris (France), Amsterdam (Netherlands) and Warsaw (Poland).
